Ruby On
Rails

Difference between Ruby and Ruby On Rails

- Ruby is the language
- Ruby On Rails is a framework (library) based of Ruby

Difference between Ruby and Ruby On Rails

- Ruby is the language

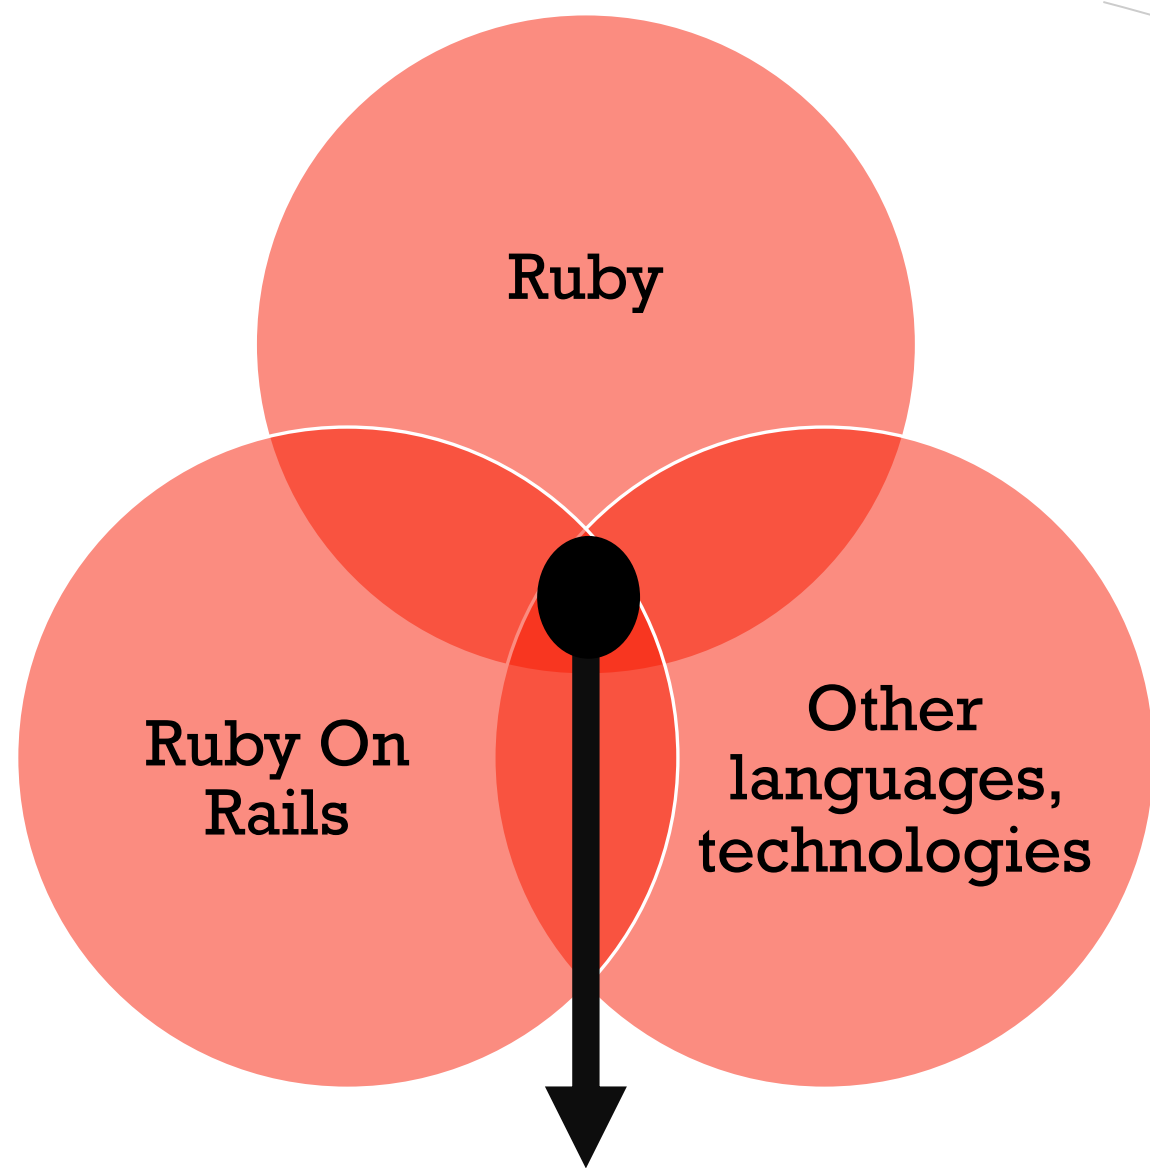

- Ruby On Rails is a framework
(library) based of Ruby

Real Life example: Luxembourgish is the language
and the luxembourgish library is your framework

Goal of
RailsGirls event

To create your (first) application

Ruby

<https://try.ruby-lang.org/>

Basic Guide: <https://www.learnrubyonline.org/en/Welcome>

Important basics

- Variables are used to save a specific information in a specific type
 - Main types of variables:
 - String → 'Hello'
 - Integer (entire numbers) → 27
 - Float (decimal numbers) → 27,44
 - Boolean (true or false) → true
 - Example:
 - `event = 'Rails Girls 2020 Luxembourg'`
 - `coach = 'Steve'`
 - `puts "Welcome to #{event}! My name is #{name}! :)"`
- Or
- `puts "Welcome to " + event + "! My name is " + name + "! :)"`

Important basics

- Depending from the variable type the Operators (*, /, +, -) will have different meaning:
 - `var1 = 1`
 - `var2 = 2`
 - `puts var1 + var2`
 - `Result: 3`
 - `var1 = 'Hello '`
 - `var2 = "people"`
 - `puts var1 + var2`
 - `Result: "Hello people"`
- String variables need to be open and closed with the same quote.
 - `'Hello'` (Single quote)
 - `"Hello"` (Double quote)
 - ~~`'Hello'`~~ (Single quote opening and closing with double quote does not work)

Important basics

- Conditions
- Operators for comparison
 - == (equal?)
 - > (greater than)
 - >= (greater or equal than)
- Careful:
 - = (is not a comparison operator)
 - = is used to assign values
 - Example:
 - car = 'Tesla'
 - puts car
 - returns → Tesla

```
2.7.1 :001 > friend = true
2.7.1 :002 > if friend == true
2.7.1 :003 >   puts 'Hello friend'
2.7.1 :004 > else
2.7.1 :005 >   puts 'Bye stranger'
2.7.1 :006 > end
Hello friend
```

The Ruby on Rails logo, which consists of a large red oval with the text "Ruby On Rails" in white. To the left of the oval is a dark gray, curved, comma-like shape. The background features several thin, light gray concentric circles and a dashed gray line.

Ruby On Rails

Guide for beginners and professionals: https://guides.rubyonrails.org/getting_started.html

MVC Principle

app/views folder is where you put your content
app/controllers folder is where the decisions are made
app/models manipulate the data of a specific table

Let's try together

Keep calm and enjoy! 😊
